I choose dashboard Madrid in details, since I found a lot of information, I'm interesting on it so let's start.

I choose Gaztambide Distract which is from the highest population density than other distract which is has 447 inhabit per hectare. Also, we can find more details about Gaztambide population is 22725 which is low comparing to the most pupiled is 78000 inhabits in Madrid , so from result I can explain highest density comparing to lowest population mostly depend on geographical location of Gaztambide Distract since it is in center of Madrid.

Insight 2, population pyramid in Gaztambide Distract distribution. Most of females in Gaztambide Distract age from 35 to 39 which is classified by the age group of young people so it follows normal distribution depend on general classified age group in general. Also, we can see 3.6% of females other than male 3.5% , there is no huge difference between them but the females more than male in Gaztambide Distract also in Madrid in general which is 4.3% of female in other side 4.2% of male which is female more then male without huge different between them , but whatever if both percentages of female large than male on Gaztambide Distract exactly or in Madrid in general does not mean there is causation for similar results .

From relation between house prices in 2015 and passenger cars per 100 inhabitant in Gaztambide Distract the average second hand housing price is 3343 and have cars per 100 inhabitants is 4114 ,these numbers from average values on all distracts in Madrid ,the average prices of houses between 2000 to 4000 so the most average for distract between this interval , also cars have interval for most distracts between 20 to 40 per 100 inhabit .This result make since depending on population density 447 inhabit per hectare which is highest density as we explain it in first insight , this value support numbers which is mean if there is high density population so, most likely, there is competition and many job opportunities that provide most of the inhabits in Gaztambide with salaries that qualify to own cars and homes with these amounts.
